

Community & Stakeholder Engagement Report

Local stakeholder map, concerns, support signals, commitments, and escalation risk.

Project: Solar Alpha **Location:** Solano County, California (fictional demo site) **Date:** August 14, 2026

Demo note: This document contains intentionally synthetic data and seeded inconsistencies for a one-day hackathon prototype. It is not a real engineering, legal, environmental, investment, or regulatory opinion.

Stakeholder overview

The project team has logged 37 stakeholder interactions across adjacent landowners, county staff, agricultural users, labor representatives, environmental organizations, and potential local offtakers.

Stakeholder group	Interactions	Sentiment	Primary issue
Adjacent landowners	11	Mixed	Traffic / viewshed
Agricultural users	7	Concerned	Drainage and irrigation
County staff	6	Neutral-positive	Permit completeness
Labor representatives	4	Positive	Local hiring
Environmental groups	5	Concerned	Raptor habitat / water
Local businesses	4	Positive	Tax base / procurement

High-priority concerns

Three adjacent landowners have requested a truck-routing restriction through the eastern residential road. The logistics plan still includes that road as the fallback route if the private heavy-haul easement is unavailable.

RED FLAG - The fallback construction route directly conflicts with a documented community request and may increase hearing / appeal risk.

Agricultural drainage

Two farming operators reported that existing field drains cross the southeast project block. They requested hydraulic confirmation that project grading will not backwater onto cultivated parcels during peak storm events.

WARNING - The current civil package does not include a signed drainage-impact acknowledgment from the adjacent agricultural operators.

Community benefit package

Commitment	Draft value	Status
Local workforce target	35% of construction labor	Draft
Road repair contribution	\$650,000	Budgeted
Agricultural drainage monitoring	\$120,000	Not yet budgeted
Community resilience fund	\$250,000	Proposed

Engagement risk score

Internal qualitative score: 58/100 (moderate-high risk). Primary drivers are routing, habitat concerns, and drainage impacts. Support improves materially if truck routing and drainage assurances are resolved before the public hearing.
